

4 Mice ranked in descending order:

Microsoft, Lenovo, Amazon Basics, and Apple

Ergonomic Evaluations:

Microsoft Mouse:

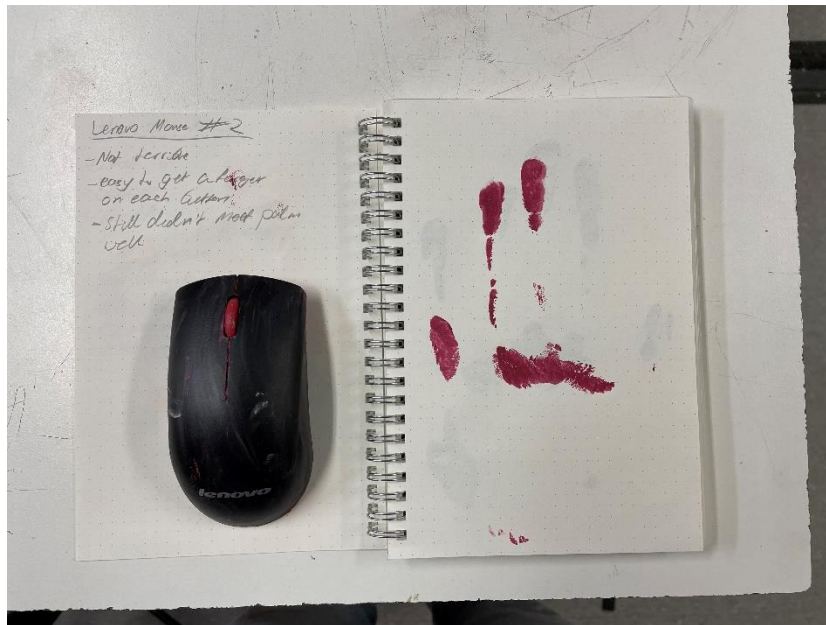

- I really liked this mouse compared to the others
- the left side provided good support for the E1 section of my thumb
- I felt that both A1 and A2 rested well on this mouse
- I did not like that to touch the wrist to the backside of this mouse I basically had to exclude all of F1 & 2

Colt Doster: Ergonomic Analysis

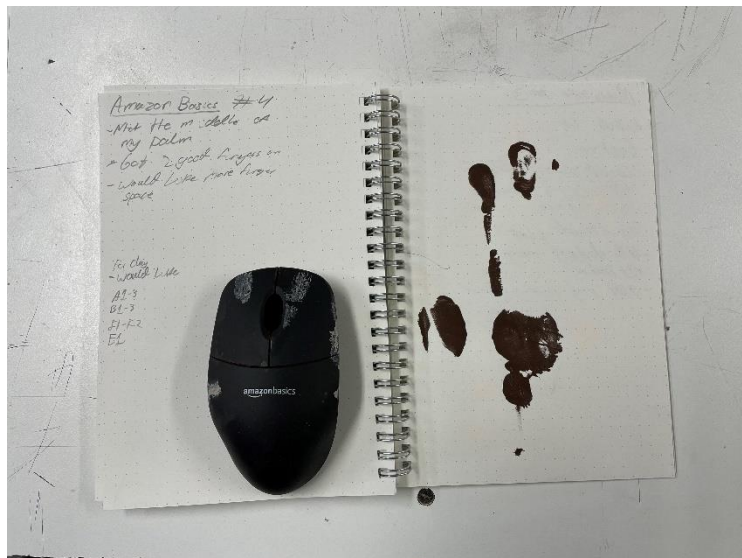

Lenovo Mouse:

- Its not terrible
- The buttons actually fit my fingers really well, I was able to get A1-A3 and B1/B2
- It still didn't meet my palm well at all, got a lot of F1 without any of the other F planes
- My pinky and ring finger were dangling off the side without a good place to put them anywhere

Amazon Basics Mouse:

- I liked the way this one met my palm it got parts of both F1 and F2
- My index finger rested really well, I got planes A1-A3 all of it on the mouse
- I would like more space for the C and D planes

Apple Mouse:

- This mouse did not feel good
- Looking at my print it is hard to explain this because I got some good support on the F planes and on all of my fingers (A1/A2, B1, C1, D1)
- I think my hand just had to sit to flat on this mouse an
- I could've used less support in F4
